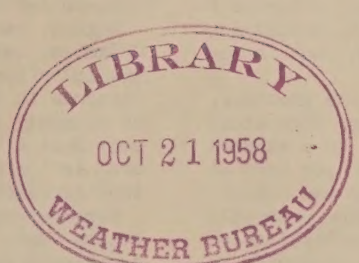
MONTHLY WEATHER MAP
CANADA



AUGUST 1958

General Summary of Weather Conditions

AUGUST 1958

With the exception of southeastern Newfoundland and the southeast coast of Nova Scotia, temperatures in August were below normal in Eastern Canada, and, with the exception of north-central British Columbia and the southern Yukon, above normal in the West. Except for southern Newfoundland, southern New Brunswick and central Ontario, precipitation was above normal in the East, and, except for a small region near Regina and for coastal areas of British Columbia, below normal in the West.

August was an equable month in Newfoundland with generally above average sunshine. Temperatures averaged one or two degrees above normal in the east and normal to a degree below normal in the west; precipitation was generally normal to slightly below normal in the south, above normal northward, with Gander reporting an excess of twenty-five per cent, and much above normal only in the north, with St. Anthony reporting precipitation more than two and a half times normal fall. August was a rather dreary month in Labrador; temperature deficiencies averaged generally two to three degrees, while precipitation generally exceeded twice the normal amount for August.

August temperatures averaged about normal in the Maritime Provinces, being generally about a degree above normal in Nova Scotia and a degree below in most of New Brunswick and Prince Edward Island. Temperatures were unusually equable, with no notable warm or cold spells.

Precipitation in the Maritimes in August was generally above normal except for a belt from Saint John, N.B. through Moncton to Summerside, where small deficiencies occurred. The excess was small in southern Nova Scotia, thirty to forty per cent in most of Nova Scotia and Prince Edward Island. However, in parts of southern Nova Scotia and northern New Brunswick, more than twice the usual August rainfall occurred. Precipitation was rather scanty in the early part of the month, with more frequent falls toward the month's end. Yarmouth reported over seven inches of rain, 173 per cent of normal, nearly half of which, 3.47 inches, fell in twenty-four hours during the general storm of August 25th-26th.

The month was generally windy throughout the Atlantic Provinces and Sydney, N.S. reported the windiest month in 39 years of record.

For the most part August in Quebec was cool, cloudy and wet. Temperatures generally were above normal during the first week. The month as a whole averaged two or three degrees below normal, although a few stations near Montreal reported temperatures normal for August or slightly above. There were no spells of exceptionally warm weather, and the maximum at Quebec City for August, 82 degrees Fahrenheit, was five degrees below the highest temperature normally to be expected at Quebec City in August. Montreal reported a record low minimum of 49 degrees on the 19th, breaking a record for the date for McGill Observatory that had stood since 1882.

Precipitation was above normal throughout the province. Rainfall excesses were rather spotty, ranging from about twenty to fifty per cent near Montreal, fifty to a hundred per cent near Quebec City, and over one hundred per cent at points in the region from Quebec City to Cabano and Tadoussac. Montreal reported thunderstorms on ten days, markedly more than the normal four days. Northward, precipitation excesses were rather smaller, with Nitchequon reporting an excess of only five per cent, but Port Harrison and Fort Chimo reported excesses of Fifty-five per cent and thirty per cent, respectively.

August in Ontario was a rather cool and generally wet month. The first week of the month was fairly warm, but cool weather later brought the average below normal. Temperature deficiencies were small in an area from Toronto west and north to Lake Huron and Georgian Bay, and in the eastern part of southern Ontario. There were deficiencies of about two degrees to the north of Lake Erie, two to three degrees over most of northern Ontario, and four degrees north of the 50th parallel.

Precipitation in Ontario in August was spotty. A few areas had precipitation below normal. Precipitation deficiencies of forty to sixty per cent were reported in a narrow belt from St. Catharines to Sarnia, in a small area around Windsor, and in that section of Central Ontario north and east of Georgian Bay. There were also deficiencies of about the same magnitude around Lake Nipissing, in a small area near Lake Simcoe, and in northwestern Ontario west of Sioux Lookout. Although London Airport reported nine days with thunderstorms, total rainfall was twenty-five per cent below normal, and there were 305.5 hours of bright sunshine which is 50 hours above the ten-year average. Everywhere else in the province, precipitation was above normal, and excesses in southern Ontario ranged from twenty to one hundred per cent. In northern Ontario, excesses were generally from fifty to eighty per cent, with Kapuskasing reporting 7.25 inches, a little more than twice the normal amount. West of Lke Nipigon excesses diminished westward.

A severe wind and hailstorm on the 31st damaged buildings in the area south of Lake Simcoe.

August was generally a warm dry month across the Prairie Provinces. Most of Manitoba had temperatures below normal, three to four degrees in the extreme east and in the north, about two degrees near Winnipeg, but generally one degree or less westward. Temperatures in Saskatchewan were near normal or slightly below normal in the northeast, but three to four degrees above normal south of the 55th parallel and four or five degrees above normal south of the 50th parallel. On the afternoon of August 8th, Estevan recorded a temperature of 106 degrees. Alberta was even warmer, with temperature excesses increasing southward from three degrees on the Peace River to five degrees at Edmonton and six degrees at Red Deer. Edmonton reported the second warmest August on record, the August 1958 mean of 64 degrees having been exceeded by one degrees in August 1915. New Records for Edmonton Airport for the dates were set on August 16th (89 degrees) and on August 25th (87 degrees).

Precipitation across the Prairies was below normal particularly throughout the grain area. There were excesses, generally small, in a belt stretching northeast to southeast through Regina, in a small area along the Saskatchewan River east of Edmonton and in the Lethbridge area. Rainfall was above normal at most stations in northwestern Manitoba, northern Saskatchewan, and northeastern Alberta. Regina's total precipitation, 2.38 inches, was thirty-eight per cent above normal, but 1.50 inches of this occurred during heavy thunderstorms on the 28th. Throughout the greater part of the Prairie Provinces, deficiencies ranged generally from thirty to fifty per cent, although Saskatoon reported a precipitation deficiency of ninety per cent, only .16 inch of rain falling during the month. On August 12th, a severe wind and thunderstorm with 5/8 inch hail, did considerable damage in an area about 30 miles south of the city.

North-central British Columbia from Ootsa Lake northward, and east of the Alaska panhandle, had temperatures slightly below normal in August, but in southern British Columbia temperature excesses increased eastward from three degrees at Vancouver and Victoria to four or five degrees in the middle Fraser and to six degrees in a belt from Penticton eastward to the Kootenay River. Victoria reported its ninth consecutive month with above normal mean temperatures.

August was generally wet in coastal areas of British Columbia, but the interior part of the province was dry with precipitation deficiencies fifty to eighty per cent. A few stations in the Lower Fraser valley recorded rainfall normal or slightly below, and the east coast of Vancouver Island, near Port Alberni, reported small deficiencies, but in general in the extreme southwestern part of the province, there were excesses of thirty to fifty per cent.

Temperatures in the Yukon averaged near normal. Precipitation was twenty to thirty per cent below normal in the southeast, and forty to seventy per cent above normal elsewhere.

Temperatures in the Northwest Territories in August were well above normal in Mackenzie and western Franklin, with excesses of one or two degrees around Great Slave Lake, four to five degrees around Great Bear Lake, and six to seven degrees at Isachsen, Resolute and Aklavik. In Keewatin, temperatures were one to three degrees below normal. There were excesses of four degrees on Nottingham Island and two degrees on Resolution Island. Baffin Island had temperatures generally below normal - one degree at Frobisher Bay and three degrees at Clyde.

The precipitation distribution in the Northwest Territories in August was quite remarkable. In a belt from Baker Lake westward to the Mackenzie River, precipitation excesses were general, and at Ennadai and around Great Slave Lake rain was particularly heavy; Ennadai reported precipitation nearly four times normal, Fort Resolution twice normal, and Yellowknife reported 4.73 inches of rain - nearly five times the usual amount for August. Throughout Franklin territory, deficiencies were general, ranging from forty per cent at Frobisher Bay to one hundred per cent at Eureka.

AUGUST 1958

TEMPERATURE. PRECIPITATION AND SUNSHINE

The temperatures for the month are given in degrees Fahrenheit in the temperature columns under the following headings:

MAX. The highest temperature.
MIN. The lowest temperature.
MEAN The mean temperature for the month.

The remaining columns give the following information:

PRECIP. The total precipitation in inches for the month including the rainfall and the water equivalent of the snowfall.
SUN The total hours of bright sunshine for the month.
SNOW ON GRND. The depth of snow in inches lying on the ground at the end of the month (when reported).

The use of (A) following the station name indicates that the meteorological observations are taken at Airport offices and (R) indicates that the observations are taken at Radio Range Stations not at Airports.
